VOL. 14 NO. 19 | Lancaster Farming, Saturday, April 5, 1969 | $2 00 Per Year

A BOY AND HIS EASTER BUNNY Delbert Landis, 9-year-old son of Mr. and Mrs. Harold S. Landis, Willow Street R1, hugs Snow-Fluff, his white 4-H project. Snow-Fluff lives with Delbert and his three brothers, Dennis, 14; Douglas 12 and Dean 2½ on their family farm located a mile South of Baumgardner Station. L. F. Photo

Conservation Round-up And Speaking Set

The Lancaster County 4-H Soil and Water Conservation Club Round up will be held next Wednesday, April 9, at 7 30 p m in the Farm and Home Center Jay Irwin said exhibits are to be brought in and set up by 7 30 and judging will start promptly at that time Awards and a program are planned

At the same time, the 4 H and FFA Conservation Public Speaking Contest will be held in conjunction with a special meeting of the County Soil and Water Conservation District All interested persons are invited to attend

(Continued on Page 7)

Holstein Breeders Visit Berks County Neighbors

A mostly cloudy day with occasional showers accompanied the 150 Lancaster County Holstein Breeders Wednesday, on their tour to Berks County But the weather didn't appear to dampen the neighborly fellowship or good natured pranks for the four bus loads of travelers

Leaving the Lancaster Shopping Center shortly after 8 a m, the tour arrived for its first stop at the Cocoosing Farm of Mr. and Mrs Clarence H Martin, Sinking Spring R6 Martin explained that his prefix was interpreted as "The Valley of the Owls' This home raised herd of 40 milk cows and 25 heifers has a rolling herd average of 15 000 lbs of milk and 600 lbs of butterfat The Martin's do the work themselves on their 80 acres using only custom work for the major harvesting activities

A little later, at the Quaker Maid Kitchen manufacturing plant, the ladies on the tour,

Co. 4-H'ers To Attend State 4-H Capital Days

Boys and girls from the Commonwealth's 67 counties, including two from Lancaster County, will see their State Government in action at State 4 H Capital Days, April 14-15 in Harrisburg

The county delegates selected to participate in the statewide event, both with outstanding records of 4 H achievement, are Diane Hershey, 547 E Main St, New Holland and John Kurtz, 1160 N Market St, Elizabethtown

While in Harrisburg they will meet with top governmental officials, observe the House of Representatives and Senate while in session, and tour the State Capital and William Penn Memorial Museum

Local legislative officials will be guests of the county 4-H members at a special breakfast on April 15th At this session delegates and lawmakers will have an opportunity to discuss local governmental issues and define the purposes of the 4-H educational program

Members of the House and Senate have also invited the county delegation to "sit-in" while in session April 14th to

DEADLY ERNEST

The annual 4-H play will be held Friday and Saturday, April 25 and 26 and a practice was held Thursday afternoon at the Farm and Home Center. In the Lancaster Farming Photo above Aunt Ethel (Kay Weaver) tells Henry (Larry Herr) to get out while Pumpkin (Betty Bailey, center) and Jill (Jaylene Irwin, right) plead for him to stay. Aunt Stella (Audrey Yunginger, left) definitely agrees Henry should go. The three act comedy is under the direction of Glen Fans, Conestoga Valley Teacher. Others in the cast include: Margie, (Peggy Eshleman); Gladys (Donna Hess) Clarissa (Sheryl Weaver), Ernestine (Nancy Yunginger); Ernie (John Fisher); Mr. Brempus (Ron Kreider); Sleepy (Ray Brubaker) C. E Grimm (Jesse Balmer); Dr. Earnest (John Kurtz).

Announcing: a dry "pop-up"! Can cut planting time in half!

Ortho Unipel STARTER SPECIAL

A starter? As a 'pop-up'? It has to be special

It is STARTER SPECIAL is a completely unique product. Here's why

— Physical Uniformity STARTER SPECIAL pellets are made to the same shape and density for maximum consistency and control in application

— Chemical Uniformity Each and every STARTER SPECIAL pellet has all three primary nutrients — nitrogen phosphorus, potassium — chemically homogenized in precisely the most desirable ratio 13-34-10 The nutrients can't separate or segregate during handling as with troublesome, hard-to-regulate dry blends"

— Double Duty Nutrients STARTER SPECIAL has both quick-acting and long-lasting nitrogen and phosphorus for thorough plant feeding. There is no urea or diammonium phosphate that might endanger the seed through liberation of free ammonia

Of course these features also make it highly effective as a banded starter But, with only slight adaptation of most planters, it can be applied directly with the seed in exacting measurement for safety and maximum response

With this kind of control, you apply much less material — only 1/3 the amount needed for banding. And the reduced material handling could cut your planting time in half!

So save time trouble, and money at planting time See us soon about applying STARTER SPECIAL this spring as a dry pop-up

From Where We Stand...

THE EASTER STORY

But, oh, how few believe it! Who will listen? To whom will God reveal His saving power?

In God's eyes He was like a tender green shoot, sprouting from a root in dry and sterile ground But in our eyes there was no attractiveness at all, nothing to make us want Him.

We despised Him and rejected Him — a man of sorrows, acquainted with bitterest grief. We turned our backs on Him and looked the other way when He went by He was despised and we didn't care

Yet it was our grief He bore, our sorrows that weighted Him down And we thought His troubles were a punishment from God, for His own sins!

But He was wounded and bruished for our sins He was chastised that we might have peace; He was lashed — and we're healed!

We are the ones who strayed away like sheep! We, who left God's paths to follow our own. Yet God laid on Him the guilt and sins of every one of us!

He was oppressed and He was afflicted, yet He never said a word. He was brought as a lamb to the slaughter and as a sheep before her shearers in dumb, so He stood silent before the ones condemning Him.

From prison and trial they led Him away to His death. But who among the people of that day realized it was their sins that He was dying for — that he was suffering their punishment.

He was buried like a criminal in a rich man's grave; but He had done no wrong, and had never spoken an evil word.

— *Isaiah 53:1-9 Living Proverbs*

Easter Greetings To You!

When slender, delicate lilies lift their pearly faces toward the sky . . . when glorious music fills the air . . . when families on their way to church have a special look of joy . when everything is bright and all are happy . . . then, you can be sure, it's **Easter!**

It's time to worship and rejoice, time to enjoy all the glad traditions of the season, from Easter treats and Easter outfits to those most precious moments when the sacred story lives anew And Lancaster County area churches have put forth a tremendous amount of effort in preparation for the Easter week programs as so many realized at the Palm Sunday cantatas and other special programs last Sunday.

One prized tradition is the exchange of Easter greetings with our friends and thus, most happily, warmly, we wish for you and yours . . . .

A Bountiful and Joyous Easter!

A Man Of History

All of us felt we were prepared for the death of Former President Dwight David Eisenhower for he had suffered so many months, had fought off so many repeated heart attacks — yet when death did come to this great man of history it still was a saddening shock. This past week the nation has fittingly paid tribute to his long and distinguished career of serving his nation and the American people.

In the Lancaster County area churches and schools both paid tribute to his memory and public flags here are flying at half mast A true man of history has passed from our scene.

Across The Fence Row

After holding out for a generation, candy bars are about to join the ranks of ex-nickel-apiece items such as toll telephone calls, soft drinks, newspapers, and cups of coffee.

When a leading candy company recently dropped its line of nickel chocolate bars, it was surely the beginning of the end of an era. Rising cocoa prices were partly the reason. But costs of processing and delivery also contributed.

Just a few years back, when world cocoa prices tumbled for a season, candy men were able to put more chocolate for the money into their candy bars. Now, the reverse is beginning to happen.

Although 5-cent candy bars (along with packs of chewing gum about the only valuable items still available for a nickel) are not slated to disappear overnight, their share of confectionery consumption is likely to continue to drop.

* * *

Morals don't necessarily improve as one ages, but inability to misbehave certainly increases.

* * *

The man at the weather bureau who predicts light snow obviously cleans his sidewalks with a snow blower.

* * *

You can always find it in the Yellow Pages, if someone will just clue you to how the darned things are indexed

* * *

Enthusiasm is the greatest asset in the world It beats money and power and influence Single-handed the enthusiast convinces and dominates where the wealth accumulated by a small army of workers would scarcely raise any interest.

* * *

A committee is a group of the unfit, appointed by the unwilling, to do the unnecessary.

* *

Love for your country is not necessarily expressed by your hatred for others.

Local Weather Forecast

(From the U. S. Weather Bureau at the Harrisburg State Airport)

The five-day forecast for the period Saturday through next Wednesday calls for temperatures to average near normal with daytime highs in the low to mid 50's and over-night lows in the low to mid 30's. Little day to day change Normal high-low for the period is 59-37

Precipitation may total ¼ to ½ inch as rain Saturday and showers again at the end of the period.

THE BIBLE SPEAKS

International Uniform Sunday School Lessons

BY LAWRENCE W. ALTHOUSE

GO! TELL!

Lesson for April 6, 1969

Background Scripture: Mark 15 42 through 16 7. **Devotional Reading** Acts 1 1-11.

Have you ever been the bearer of good news?

"Dad says I can go!"
"You passed the exam!"
"I found your wallet!"
"We won the championship!"
"We found your little boy, ma'am!"
"She's going to be all right!"

Rev. Althouse

Search your imagination for the most welcome news you might ever carry to someone else. No matter what you come up with, this will always be the best news you can bear to anyone: CHRIST IS RISEN!

How to say it

Many people have proclaimed this message in many different ways.

Charles Wesley said it with a hymn:

Christ the Lord is risen today, Alleluia!
Sons of men and angels say, Alleluia!
Raise your joys and triumphs high, Alleluia!
Sing, ye heavens, and earth, reply, Alleluia!

Pierro della Francesco said it with a magnificent painting, "The Resurrection Morn."

The Apostle Peter said it from a cross in Rome.

Missionaries the world over say it with quinine, powdered milk, books, tractors, and the sweat of their faces.

And you . . . ? How do you and your church say it?

Saying it is important, for that's how Christianity began. On that first Easter morning three sorrowing women went to a tomb, their hearts immersed in sorrow. And there, something wonderful happened!

The empty tomb

First of all, they found an empty tomb! Something strange had happened since they had last been there. The huge stone that had covered the entrance was found moved to one side. Going within, they found that the body of Jesus was not there! He was not to be found in the tomb, nor is he to be found there today. The graveyard, the burial vault, the tomb—Jesus is not to be found in any of these.

Secondly, they received a message of "good news," **He has risen!** (Mark 16:6). Jesus was not missing from the tomb because his body had been stolen away, nor had it disappeared into thin air. He was not there now because he had been awakened from the sleep of death and had risen from the slab to go forth into the world once again. They had come expecting to shed tears over a useless corpse and found instead the good news that their Lord was alive again!

Thirdly, they received a commission: **"But go, tell his disciples and Peter that he is going before you to Galilee; there you will see him as he told you."** (Mark 16:7) It was a wonderful moment, perhaps the most thrilling moment of their lives, to stand within that tomb and discover that Jesus had conquered death and was alive. Yet, they were not to stand there and savor the moment for themselves, for they needed to "go, tell" others that great news.

Greatest news story

Isn't that what Easter must mean for us too? In fact, isn't this the very basis of what it means to be a Christian?

To discover for ourselves that "He is risen!"?

To "go, tell" others that glorious news?

That is why the Christian message is called the "gospel" (good news). That is why also it is the greatest news story that can ever be taken to anyone.

Perhaps as we have studied Mark's gospel we have regarded Jesus as someone who lived long ago. Yet, let us know that he is also our contemporary. Important though it may be that he once lived, it is even more important to know that still he lives! That is what we are called to "go, tell . . . !"

(Based on outlines copyrighted by the Division of Christian Education, National Council of the Churches of Christ in the U. S. A. Released by Community Press Service)

Read Lancaster Farming For Full Market Reports

NOW IS THE TIME...

By Max Smith
Lancaster County Agent

To Put It In Writing

Many farm leases went into effect April 1 and it is very important that all concerned parties know of all their responsibilities We realize that an agreement is just as good as the persons making the deal, however, if the terms are in writing and both parties possess a copy, there will be less chance of misunderstandings and unpleasant relations It's not too late to draw up copies and confirm the lease details

To Plan Sewage Systems

The problem of sewage confronts many of us With many new homes and industries being built out in the rural areas, the problem of disposal of waste needs additional attention. Septic tanks and disposal fields work fine if contractors, builders, and owners understand the requirements and make plans for the system. Some heavy soils will not permit sewage systems to work A special circular on the subject is available from our Extension Office.

To Kill Brush

The time for killing brush and trees in the dormant stage is getting short and needs attention before all types of crops are planted The use of 2,4,5-T on stumps and brush will prevent growth without doing damage to other crops if done early in the spring Caution should be used in the application of this herbicide because it is very selective; it will injure or kill most any kind of tree or plant.

Elizabethtown Future Farmers Honor Parents At Banquet

The Elizabethtown Future Farmers of America held their Parents and Son Banquet last Friday night at the high school About 70 persons attended

Honorary Chapter Farmer Degrees were given to two business men They are Warren Alleman, Baum's Bologna Inc, and Milton Hess, Petticoffer Dodge

The Star Red Rose Farmer Degree was awarded to Paul Swanger, Star Farmers is James Hiestand and Star Green Hand is Dale Aungst

In the Foundation Awards, James Hiestand won in Poultry, Mike Baum, Dairy, Larry Baum, Livestock, James Kreider, Field Crops and Clair Oberholtzer, Mechanics

John Kurtz, was awarded the PP & L award and James Kreider, won the Record Keeping Award from the Elizabethtown Office of the Harrisburg National Bank and Trust Co

Kiwanis Club Trophies went to James Kreider in Corn Growing, Bruce Kauffman, in Tobacco and Clair and Glenn Oberholtzer, in Swine

The FHA girls served the meal

Long-Term Herbicide Use In Orchards Safe And Effective

Eight million more bushels of apples and peaches of higher quality can leave the orchards each year if herbicides are used effectively to control weeds, the U S Department of Agriculture reports

Weeds are a continual problem in orchards and a major cause of lowered quality and reduced yields They rob trees of nutrients and water, harbor insects that migrate onto the trees, and furnish protective cover for mice that chew bark and roots When weeds are controlled, these problems are controlled too

In an 8 year research program, horticulturists William V Welker of USDA's Agricultural Research Service and E G Christ of Rutgers — The State University, New Brunswick, N J, effectively controlled weeds with repeated applications of herbicides year after year They found that residues did not build up to cause any visible tree injury nor were there adverse effects on the fruits

In their experiments the scientists controlled crabgrass, foxtail, pigweed, poison ivy, curly dock, plantain, and several other weeds with diuron, simazine, terbacil, dalapon, paraquat, amitrole, diphenamid and dichlobenil Type of fruit tree and weed population determined the chemical used, and the dilution, rate, and time of its application

Weeds can also be controlled by mowing or cultivation, but these are expensive practices They must be repeated often during the growing season and require costly manpower Also, the machinery often breaks branches, scrapes off bark, and injures roots

On the other hand, herbicides are inexpensive and usually need only single annual applications to be effective The most costly herbicide now recommended by the researchers controls weeds in a 10 by 10 foot plot for about 25 cents a tree, plus the cost of equipment and labor Other recommended herbicides cost less than a penny a tree a year

In continuing studies, the researchers will seek selective, broad spectrum, safe herbicides for use in combination with mechanical, ecological, and biological weed control methods. They also will look for ways of improving herbicide effectiveness with herbicide rotation procedures and new chemical combinations and compounds

Clawed Wings

Hoatzins, strange birds of South America, are hatched with claws on their wings The birds use the claws as extra legs to climb through tangled underbrush

A drop of Banvel controls broadleaf weeds. Cost? A drop in the bucket.

Just small amounts of Banvel per acre do the job without making corn brittle It's a liquid and can be sprayed postemergence up to the time corn is 36 inches high *or* ten days before tassel emergence, whichever comes first Banvel penetrates broadleaf weeds that other herbicides miss. It translocates throughout the weed. . tough Canada thistle, pigweeds, smartweeds, velvetleaf, lambsquarters, spurge and others are all controlled. Corn is freed of weeds. Order Banvel herbicide today.

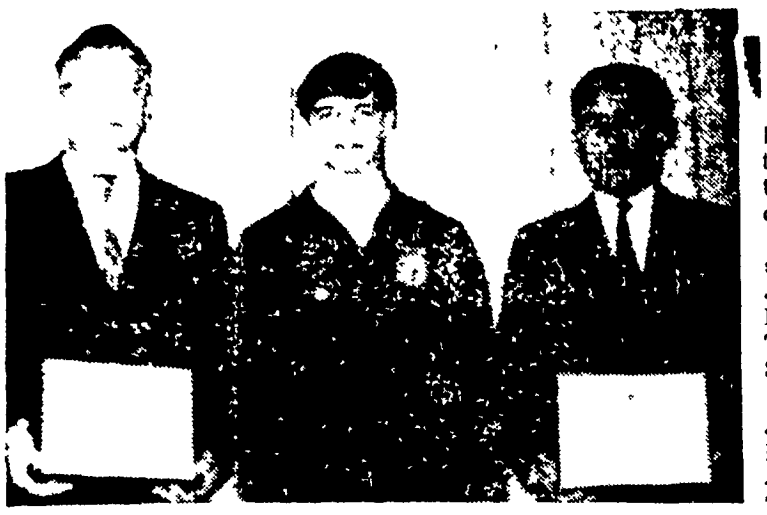
Pequea Valley FFA Banquet Held



PEQUEA VALLEY FFA Honorary Chapter Farmers are Robert Esbenshade, Esbenshade Turkey Farm (left) and Dave Shirk (right), Shirk Chevrolet, Inc. Chapter President Robert Wanner, made the presentations at their Annual Parent and Son Banquet last Friday night.

CITATION AWARDS were presented to J. Arthur Rohrer (left) Paradise Farmer and James Schichter, PV English Teacher, at the Pequea Valley FFA Banquet. Bob Wanner, Chapter President made the presentations.

The Pequea Valley Future Farmers of America held their Annual Parent and Son Banquet last Friday night at the high school The program featured award presentations and the announcement of the Honorary Chapter Farmers

Receiving the Honorary Degrees were a local farmer and an automobile dealer They are Robert Esbenshade, Esbenshade Turkey Farm and Dave Shirk Shirk Chevrolet, Inc

Citations of appreciation were also presented to J Arthur Rohrer, Paradise Farmer and James Schlichter, English Teacher at the high school

The Chapter Star Red Rose Farmer is Ray Stoltzfus, the Star Chapter Farmer is Arthur Bomberger and The Star Green Hand in Roger Leaman

In the Foundation Awards Paul Clark won in Dairy, Vernon Yost, Crop: Arthur Bomberger, Public Speaking: Ray Stoltzfus, Livestock and Tom Greinder, Mechanics

Ken Weber, State Secretary was a guest speaker and President Wanner served as toastmaster 115 persons attended

(Continued from Page 1)

saw many ways to renovate and decorate kitchens The stop also featured a demonstration of a special new type of cook stove Many of the men felt it might turn out to be the most expensive stop of the day if the wives decided they needed a new kitchen at home However their fears were unfounded because the management of Quaker Maid reported they had been ordders to keep any new orders waiting until December The plant has six acres under roof and produces 2 000 kitchen cabinets each week

Then it was on to Reu Hel Farms, where Reuben Field and his son in law, Elwood Ohlinger have worked their 137 registered Holsteins into a Progressive Breeders herd since 1966 The last six-years herd average is 14,914 lbs of milk and 566 lbs. butterfat

There are 20 Very Good cows in the herd with dairy character showing strongly throughout the 87 milk cows The operation features partly stall and partly loose housing with a bunk feeder and a 24' x 76' silo.

Lunch was an all-you can eat affair at the Shartlesville Hotel.

● Holstein

(Continued from Page 8)

After noon, the tour stopped at the 600 acre father sons partnership of Arthur, Wayne and Harold Lesher The 90 milk cows are housed in a completely new 130' x 80' free stall barn with a 100' bunk feeder and 110 stalls

The old barn is used for the heifers and young stock A liquid manure system is used The storage capacity in the system is 20,000 gal and is emptied every six weeks The cows were reported doing better in the new 1½ year old set up with production on several cows going over 100 lbs of milk a day to 130 pounds

The last stop was the Wernersville State Hospital Farm These 83 milk cows have a herd average of 15,825 pounds of milk and 602 lbs of buterfat, third high in Berks County A part of the hospital institute was also toured

And finally, the tour ended at 5 p.m where it had started. And as this reporter left the parking lot, the sun broke through the clouds to send local dairymen back to their own milking at home with about as much sunshine as they had seen all day

ON THE HOLSTEIN TOUR are (left to right) Mr .and Mrs. Clarence H. Martin, Cacoosing Farm, Sinking Spring R6; James Haldeman, Berks County agent; Paul Zimmerman, tour chairman and Clarence Stauffer, Association President. The cow in the Martin herd is Shirley Pabst Bell, classified Very Good with 17,000 pounds of milk and 740 lbs of butterfat. L. F. Photo

Heat-Treating Eggs Halts Chronic Respiratory Disease

A special heat treatment of eggs before incubation stops egg transmission of chronic respiratory disease in chickens

The major infective agent of this disease is Mycoplasma gallisepticum, a very small bacterium Hens may carry Mycoplasma organisms in the reproductive tract, and egg transmission is a major route of Mycoplasma infection

Since the early 1960's researchers have had some success in reducing egg transmission by treatments applied before incubation Most recently, dipping eggs in antibiotics paired with other techniques, proved helpful in cleaning up Mycoplasma infection from most broiler breeding flocks

Mycoplasma eradication remains to be completed, however, in certain poultry lines. While dipping could possibly complete the eradication program, the method has drawbacks Some Mycoplasma slip through, and special material and equipment are needed

These drawbacks can be overcome, it now appears, with a new eradication method that parallels pasteurization—heating eggs to a predetermined, moderately high temperature ARS veterinarian H W Yoder, who devised the new method, says that it depends for success on achieving an internal egg temperature of 114° F under a specified set of conditions

The method was evaluated at the ARS Southeast Poultry Research Laboratory, Athens, Ga, when treated eggs had been incubated for 14 days — a good time to check for egg-borne infection Results showed no Mycoplasma survival in eggs that had been experimentally *infected*

Yoder calls 114° the critical temperature because it kills the Mycoplasma and consistently keeps hatch of treated eggs within 8 to 10 percent of normal. Temperatures higher than 114°, while eliminating Mycoplasma just as completely reduce chick hatch more drastically

The optimum temperature was achieved in preliminary experiments by heating a batch of 40 eggs in a small incubator for 6 hours to eradicate Mycoplasma. Yoder found, however, that each size of load poses a different problem The largest load he has checked was 2,000 eggs—close to a commercially feasible batch

For this load, the incubator must run 10 to 12 hours for eggs to reach 114°, no further holding at this temperature is needed Hot-running incubators should be adjusted to achieve the desired temperature in the 10 to 12 hour range, however. Shorter treatment is ineffective; longer treatment increases embryo damage

Since standard incubators and equipment are used for the treatment, the only special requirement is a good mercury thermometer The major cost is the reduced hatch, which at the level incurred with 114° is reasonable for the primary breeder, who does the basic breeding for the poultry industry

'For success," Yoder says, "the breeder must determine the temperature precisely The best way to get a good temperature is to put the thermometer in a sandfilled jar or bottle and place it with the eggs I'd buy three thermometers and test them together before use If one reading disagreed, I'd still have two others to give me assurance the job is being done right"

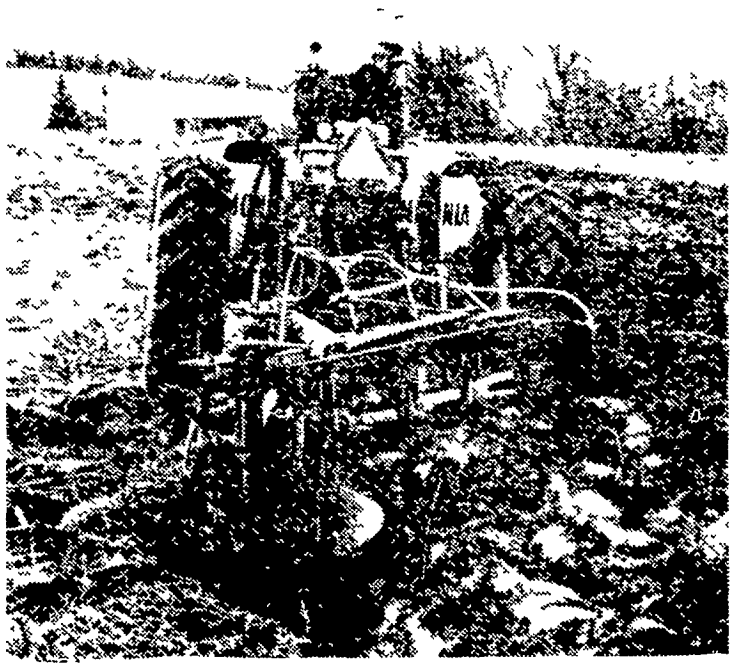
✻ Farm Management Profit-Tip from Organic Plant Food

How to profit from anhydrous ammonia plow-down

Most concentrated form of nitrogen

Anhydrous ammonia (NH_3) is the most concentrated form of nitrogen fertilizer — 82% N. Other nitrogen fertilizers of lower analysis are made from NH_3.

Compare your cost per acre using NH_3 with any other source of nitrogen, and your savings are evident. It's the most economical method of application per pound of nitrogen.



Anhydrous ammonia plowdown facts

- Plowdown application of anhydrous ammonia is an effective way to reduce spring field work. First, bulk spread phosphorus, potash. Then turn them both under as you plowdown anhydrous ammonia for your source of nitrogen. This provides nitrogen, phosphorus, and potash at plow depth for a steady, season-long source of nutrients.
- Reduce your costs by doing two jobs at once — plowing and getting your nitrogen in the soil.
- Nitrogen applied by anhydrous ammonia plowdown requires fewer trips over the field. Soil compaction is reduced.

Anhydrous ammonia plowdown is an effective farm management procedure. Let us help you work it into your total soil fertility program. Call us, we'll come to see you.

NEPPCO Recognizes Local Feed Mill

The Northeastern Poultry Producers Council recognized Gehman Feed Mill, Denver, this week in their semi monthly news letter for designating NEPPCO as the recipient of funds earned under the Pfizer Table Egg Promotion Program This program enables a company purchasing Pfizer agricultural biological feed supplements to designate any recognized non profit egg promotion agency to receive a percentage of the purchase price

Originally announced for a six month period, Pfizer has extended the program another six months

The NEPPCO letter said, "Our sincerest thanks to Gehman Feed Mill, Inc and Chas Pfizer & Co., Inc. for this unexpected but most welcome assistance"

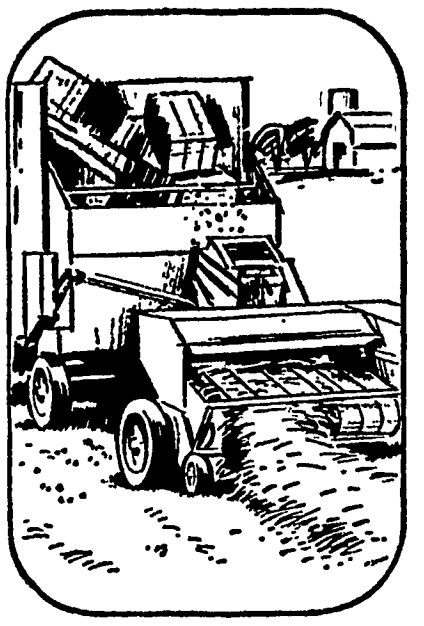
Proper sewage disposal is a subject of concern to many property owners as well as local government and health officials. With the gradual increase in population the problem of waste disposal becomes more important A better understanding of soil types and of various sewage disposal systems would be helpful to all of us. In limestone country the danger of contamination of local water supplies is very important and one that requires careful planning and designing to avoid trouble An opportunity to learn more about this subject will be provided through a public meeting sponsored by our Extension Service on Thursday evening, March 27th, at 7:30 p.m. in the Farm and Home Center. We urge all those with a problem, or those interested in learning more about sewage disposal, to attend this meeting.

Marimba's Origin

Music experts say that the Marimba is neither of American Indian nor of Spanish origin. Because it resembles the native African limba in tone and name the accepted theory is that a Negro slave from Africa made the first one, using gourds as sounding boxes.

April is one of the very best months to plant trees and shrubs in southeastern Pennsylvania. Bare rooted plants should be planted at once after receiving or the roots kept moist until planted. Holes should be dug larger than the spread of the roots and the backfill should include 20 to 30% peat moss or other humus, this will increase the moisture holding capacity of the soil near the roots and hasten root development Leave the tree or shrub in a depression rather than at the top of a mound of soil, this will help hold moisture The soil around the roots should be kept moist by soaking every week to 10 days during the first growing season; a 2 to 3-inch mulch over the area will help hold moisture. Refrain from using any fertilizer the first year; it will be of little value and may burn the tree roots

The Satisfaction That Comes From Doing A Good Job Of Farming



It's a great feeling to know that you are the master of your farmlands . . . that when you treat your soil right, it will treat you right. Liming is one of the most important factors in keeping your soil in the highest productive range. By raising the pH from a level below 6.0 to 6.5 or higher, you can expect to harvest .8 more tons of alfalfa per acre, with similar increases for all other forage and cash crops.

The story of Merry Tiller's two extra horses.

Merry Tiller's exclusive chain-and-sprocket drive delivers the equivalent of two more actual horsepower than worm-gear-driven machines. The drive assembly consists of heavy-duty roller chain, sprockets and bearings—sealed in oil within a steel case It's simple. It's sensible And it's so efficient, a 4-hp Merry Tiller can out-work any 6 hp worm gear machine!

Merry Tiller makes better use of its muscle, too The patented gripper-leverage action makes it easy to control tilling depth. And Merry Tiller has interchangeable rotors to tackle any tilling problem See us today.

NEW Hay-King...

toughest haymaker built!

Heavier construction — all over — makes the difference in the Gehl Hay-King. Exclusive all-chain drive, with slip clutch protection. Positive power because there are no belts to slip when going gets tough. So, pour it on, Hay-King's easy-adjusting reel reaches far out and under, even in down and problem crops. Combs back a full nine-foot swath to full-width crusher rolls that evenly, gently lay down a fast drying, leaf-saving windrow. Other features: • Floating head • Full swath without removing windrow shields.

Make us prove it with a demonstration!

give them an opportunity to gain a clearer understanding of legislative functions.

Another highlight on the program is the Monday night social get-together when boys and girls will be paired as dates by using data fed into a computer.

Explaining the purpose of State 4-H Capital Days which began in 1965, P. Glenn Harr, Assistant State 4-H Club Leader at Penn State, said the event is part of the citizenship program which helps members to become more responsible citizens.

The county delegation will be accompanied to Harrisburg by Mary Rosenberger, Assistant Extension Home Economist.

S & W District Plans Long-Range Program

The Lancaster County Soil and Water Conservation District held their monthly meeting at the Farm and Home Center Wednesday night The main business of the evening was making a long range plan.

Gerald [illegible] Conservation [illegible] tions of [illegible] plan. "It helps the District to do a better job of serving land owners," he said "It sets guidelines for using available resources and serves as a base for conservation assistance" Lancaster County is one of 35 Districts in the state who publish a long range plan

In other business, the following cooperators were approved [illegible] Bleacher, 120A Manor [illegible] Penn Twp, Kenneth Hostetter, 11A Rapho Twp., Ivan S Zimmerman, 86A East Earl Twp, Melvin Lapp, 32A Dunmore, Adolph Neuber, 104 Clay, West Earl Twp.

World's Tallest Herb

Puya raimondii, the world's tallest herb, grows in the stony reaches of the Bolivian Andes The herb, which attains a height of 40 feet when full-grown, blooms only once in 150 years and dies after sending a 30 foot flower stalk into the sky

Multiple Births Mean More Beef

The average beef cow that conceived after an experimental hormone treatment weaned 1 11 calves — up from 0 85 normally recorded in good beef herds

The treated cows were part of a practical experiment at Fort Reno Livestock Experiment Station, El Reno, Okla., to try out available techniques for inducing multiple births Cooperating in the trial were livestock researchers E J Turman of Oklahoma State University and R E Renbarger and D F Stephens of ARS

They injected 81 beef cows with pregnant mare serum (PMS) a substitute for the natural hormone (follicle stimulating FSH) that stimulates the ovary to produce eggs Cows were injected twice — during the early and the late parts of the estrous cycle Then at the end of the cycle, they were injected with chorionic gonadotrophin to assure ovulation, that is shedding of each egg

At the first mating following hormone treatment, 52 cows conceived Counting only offspring that survived 1 month, they produced 29 single calves, 12 sets of twins 8 sets of triplets 2 sets of quadruplets, and 1 set of quintuplets In future trials the scientists hope to increase the number of twins and triplets without getting quads and quints, which present special management problems

Multiples were lighter at birth than single calves Twins and triplets averaged 55 pounds, and quads and quints averaged 34 pounds compared with 83 pounds for single salves

Light birth weight could be accounted for, in part, by length of gestation It ranged from 277 days for twins to 258 days *for quints compared to 281 days for single calves*

At weaning, twins and triplets averaged 374 pounds, quads and quints 332 pounds All were generally raised as twins, using providing access to feed Singles, raised as singles without feed, averaged 462 pounds This shows researchers emphasize, that offspring of the average cow with multiple calves produced 746 pounds of beef at weaning — more than 1½ times the output of 462 pounds recorded for cows with single offspring

But results, while encouraging, raise a number of practical problems

First 48 percent of cows with multiple calves did not expel their placenta naturally, compared to 2 or 3 percent in the normal herd

Second, 25 percent of the cows raising twins did not rebreed, perhaps in part because of the heavy stress on cows raising twins Further, these cows did not really have enough milk for two calves Both problems may be solved by crossing beef breeds with dairy cattle

Third, the treatment is costly in materials and labor Price of hormones, now about $7 per cow treated, must be reduced by new, cheaper, mass produced hormones or hormone substitutes Labor costs may come down when research now underway permits workers to combine treatments for multiple births with treatments for estrous synchronization Synchronized cows can be treated and managed as a herd rather than as individuals

Scientists at Fort Reno and other stations will chip away at these drawbacks because the potential of multiple calves is undeniable, particularly when viewed from the standpoint of calves weaned per cow

To get a basic idea of how hormone dosage affects ovulation, physiologists treated 61 beef heifers, 2 and 3 years old, with follicle stimulating hormone (FSH) obtained from pituitary glands of sheep and horses FSH stimulates the ovary to produce eggs

The 5 day treatment of two injections daily was started on the eighth day of estrous, which had been synchronized by feeding progesterone Heifers were bred naturally as they came into heat Sixty to 72 hours later, results of the entire procedure were checked by surgically examining the ovary and collecting eggs that were shed

The best dose was 6.25 milligrams of FSH, which resulted in an average of 2 1 eggs ovulated per cow. Half that dose produced too few eggs — only 1.1 per cow. A double dose produced too many — 8 0 per cow.

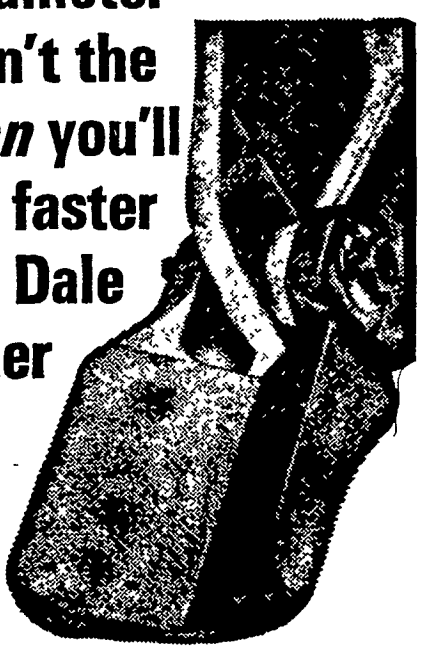
PIONEER OF BETTER IDEAS IN SILO UNLOADING

A 2-foot diameter impeller isn't the *only reason* you'll feed cattle faster with a Van Dale silo unloader



HERE'S ANOTHER...

...*pioneered* by Van Dale back in 1957 . . . the heftier cast iron swinging V-paddles. They give the impeller more unloading *capacity*. Each 6 lb. V-paddle is weighed, matched, and balanced, then pre-run for more dependable performance. And then there's the solid-weld construction of the heavier gauge impeller housing for longer life in the silo . . . and the biggest impeller *throat* . . . and there are many more reasons that contribute to Van Dale's superior capacity and reliability in addition to the impeller . . . like the double augers and the . . . But why not let us tell you about them. We'll be happy to drop by to see you at your convenience.

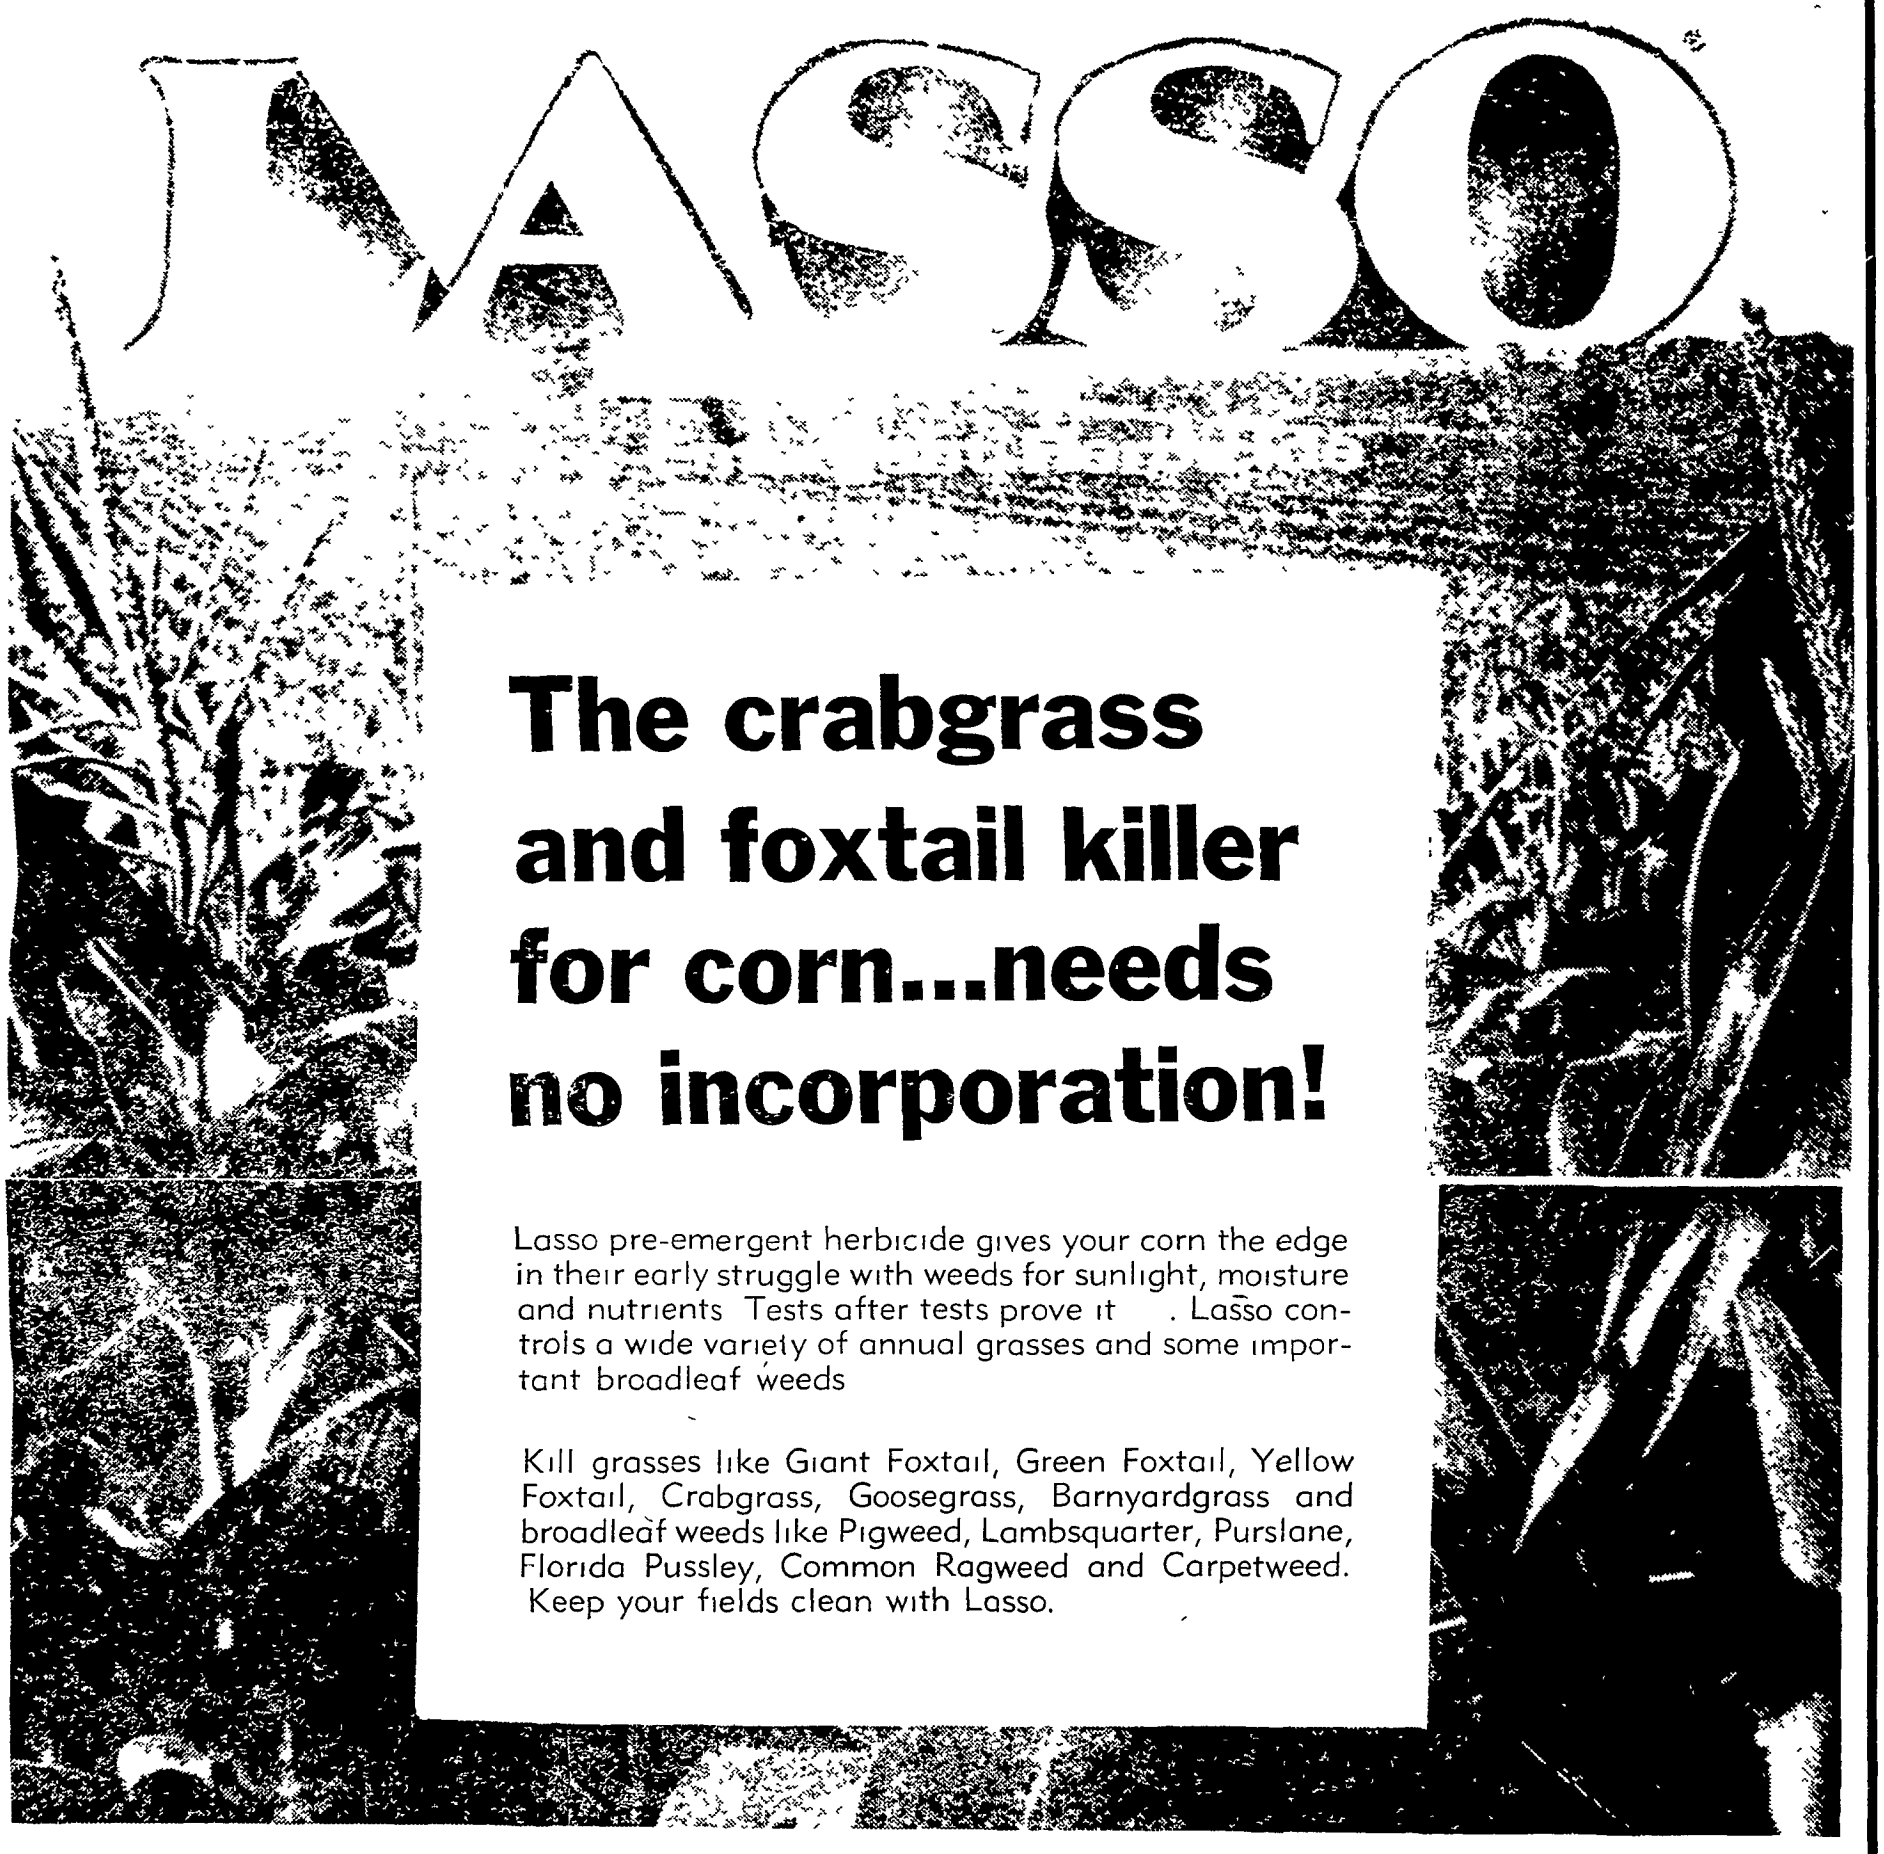
AGWAY

There's a new name on the corn horizon...



The crabgrass and foxtail killer for corn...needs no incorporation!

Lasso pre-emergent herbicide gives your corn the edge in their early struggle with weeds for sunlight, moisture and nutrients Tests after tests prove it . Lasso controls a wide variety of annual grasses and some important broadleaf weeds

Kill grasses like Giant Foxtail, Green Foxtail, Yellow Foxtail, Crabgrass, Goosegrass, Barnyardgrass and broadleaf weeds like Pigweed, Lambsquarter, Purslane, Florida Pussley, Common Ragweed and Carpetweed. Keep your fields clean with Lasso.

SECOND SECTION

Pennsylvania Among States Placed Under Beetle Quarantine

Because of the large area now infested with the cereal leaf beetle, Illinois, Indiana, Michigan, Ohio, and Pennsylvania will be placed under Federal domestic plant quarantine by the United States Department of Agriculture effective April 1.

All five States are now regulated under State quarantines because of cereal leaf beetle infestations The impending change from State to Federal quaranties were to be in the **Federal Register** March 27.

The decision to change from State to Federal regulation was made following a public hearing held by plant pest control officials of USDA's Agricultural Research Service. Evidence presented at the hearing led to the conclusion that a Federal cereal leaf beetle quarantine could be enforced more effectively than separate State quarantines.

Under the provisions of the Federal quarantine, movement of items such as hay, straw, fodder litter, small grains, corn, soybeans, sod, and used harvesting machinery from infested areas will be regulated Articles shipped from noninfested areas of quarantined States must be accompanied by shipping papers showing their point of origin.

All of Ohio and all of Michigan, except the Upper Peninsula, the northern two-thirds of Indiana, and portions in western Pennsylvania are infested with the cereal leaf beetle. Limited infestations have been found in Illinois

Anyone moving materials from these areas is advised to contact the local plant pest control office or county agricultural agent for details The regulations vary with the item to be moved and may vary with the season of the year. For example, some commodities such as hay and straw are regulated only during those months of the year when beetles can be spread into new territory by those commodities. Other commodities such as grass and forage seed and sod are regulated the entire year Treatments required to eliminate the pest hazard also vary the the commodity

Regulated items moving from infested areas must meet quarantine requirements for eliminating any pest hazard. Any found to be moving in violation of quarantine regulations must either be retured to infested areas for disposition or treatment, or be treated in transit (usually at higher cost), or destroyed Persons knowingly violating regulations are subject to prosecution

Twin Valley Chapter Of Young Farmers Hold Annual Meeting

The Twin Valley Chapter of the Pennsylvania Young Farmers Association held their third annual banquet last Friday night at the High School cafeteria at Elverson

In the awards and recognition program Andrew Stoltzfus won the Corn Contest with the highest net profit, ($153.76) highest yield, ($165.81 bu.) and the highest feed value (37% T.O.N.) Stoltzfus also had 172.5 bushels per acre in the Five-Acre Corn Contest.

Other winners in the Five-Acre Contest were: Ralph H. Stoltzfus, 150 1 bu.; Wilmer Kraybill, 118 bu. and Ben S. Beiler, 136 3 bu

In DHIA for Berks County, Andrew Stoltzfus had 13,946 pounds of milk and 571 pounds of butterfat. In Chester County, Elmer Hertzler had 14,075 pounds of milk and 565 pounds of butterfat and Lancaster County, Reuben Smoker had 13,673 pounds of milk and 533 pounds of butterfat

The officers for the 1969-70 year were named as follows: Omar Beam, Elverson R1, presi-

Vorlex®

...THE COMPLETE SOIL FUMIGANT

It takes a complete soil-fumigant to protect your tobacco crop from soil pests to insure a healthy start for *every* plant. Don't fool around with "part-job" fumigants . . . insist on Vorlex — the *complete,* whole-job soil fumigant — you'll get more pounds of tobacco per acre — more profits too!

APPLY VORLEX IN EITHER OF TWO EASY WAYS!

Row Fumigate—*All* types of nematodes, soil disease, and weeds, can be controlled by Vorlex when it's applied as a row fumigant . . . and at a cost starting as low as $20.00 per acre!

Or Broadcast (overall) Fumigate—Vorlex can also be used as a broadcast fumigant to control nematodes and soil disease.

Either method of Vorlex application can provide a healthy stand with even growth; plus uniform maturing and a bigger yield.

Each year Vorlex fumigate your entire tobacco acreage . . . get more tobacco per acre — more profits for you.

VORLEX is great for vegetables too! TRY IT!

Leaders for the coming year are Mrs. Tyrus Keeney, Mrs Kenneth Borry and Mrs Charles Cherphy

NORTHERN SOIL & WATER
By Curtis Horst

Karen Martin presented a demonstration about "Capillary Water" to the Northern Lancaster Co. 4-H Soil and Water Conservation Club at its meeting on March 20. The meeting was held in the basement of the Hinkletown Church at 8:00

Paul Martin, Club leader, taught the lesson for the night He reminded the members to finish their projects for the club round-up on April 9

The next meeting will be held on April 3, at 7 15

Hazards Of Overweight

Overweight is the nation's number one health problem, points out Mrs Ruth J Buck Penn State extension foods and nutrition specialist Our society with an economy of plenty but a lack of physical activity, sets the stage in many cases of overweight. At each stage of the life cycle persons need to learn and practice a way of life that will keep them within their ideal weight range

Correspondence Courses

STUDY TREES FOR HOME LANDSCAPES

A single tree on your home grounds may do more than a dozen shrubs.

Whether your need is for shade from summer sun, the balance provided by small trees at the front entrance of your home, or a flowering tree at your back door, a plant can be found suitable to your wants

According to a Pennsylvania State University correspondence course on trees for your home grounds, over 50 species of trees are useful for home landscapes. Within each species there may be half a dozen or more varieties carried by nurserymen

The selection and care of ornamental trees for home landscapes is the subject of the course. It's newly written (revised in late 1968) and gives detailed instruction on planting, fertilizing, pruning, control of insects and diseases, with suggestions on how to use each kind to best advantage in landscaping.

Send your name and address with $3 85 to Trees, Box 5000, University Park, Pennsylvania 16802. There are no other charges and a complete course copy comes to you by mail

Wild Pets

Every time I read about a person with some unusual pet such as a skunk, a monkey, snake, or lizard I wonder if that particular family realizes the possible danger present with this wild pet. Many of these creatures are carriers of disease and dangerous infections. Monkeys may be carriers of tuberculosis or fungus diseases; skunks can carry large amounts of rabies virus in their saliva for long periods of time; bites of wild cats, racoons, lizards, and snakes can produce dangerous infections. Our present advice it to keep domestic animals as pets; they may not attract as much attention but they are much safer

Annual Net Worth Statement Indicates Financial Progress

One of the best measures of your financial well-being is a net worth statement according to Helen E Bell extension home management specialist of The Pennsylvania State University

To find your net worth add up what you own and subtract what you owe The results may give you the satisfaction of seeing some financial progress or indicate that you may need to tighten your purse strings

Miss Bell suggests when adding up what you own that you include cash on hand and in checking and savings accounts present value of your home and other real estate value of cars if sold today for cash and market value of jewelry antiques and heirlooms Also add the cash value of your life insurance policies market value of stocks and present value of bonds cash value of annuities and retirement plans money other people owe you and current value of furniture appliances, and miscellaneous items

The next step is to total the money you owe, says Miss Bell Include mortgages and liens on your house, car or other property installment debts on household equipment and house furnishings, personal debts and other bills outstanding Subtract your total debts from the total of what you own The result will be your net worth

Some of your figures may be estimates However they will give you an idea of your overall financial status If you compare your progress from one year to the next Miss Bell points out

Snow Tires

It appears that the season for snow tires is about over for this winter even though they weren't badly needed at any time in this part of the state A few tips on the proper storage of snow tires from our engineers Store them in a cool dry place and lay them flat on a clean surface rather than stand them up keep oil gasoline or other petroleum products away from the tires Studded tires should be marked left or right so they can be remounted in the same position studs wear at a slight angle and if mounted on the opposite side some of the studs may come out next winter Tires that are permanently mounted on extra rims should have the air pressure reduced to 15 pounds and stored similar to other tires These practices will lengthen the life of the snow tires

Solomon's Reign

It is not known when King Solomon came to the throne of ancient Isreal but the Bible uses the round number 40 years when speaking of the length of his reign

Miss Patterson Decorates Easter Eggs All Year

By Mrs Charles McSparran
Lancaster Farming Staff Writer

Easter comes but once a year to most people however it lasts all year for Miss Margaret Patterson of Leacock whose hobby is decorating eggs She became interested in this art about five years ago and is self trained Since then she has decorated hundreds of eggs She sells them and has given them to many of her relatives and friends.

She buys eggs of different kinds and has many unusual kinds given to her What kinds of eggs has she decorated? Chicken, duck turkey, bantam, goose, pheasant, peafowl guinea pigeon, snake and bird eggs that fall out of nests such as robin, quail etc

The most fascinating kind are the ones laid by her Araucana chickens This breed originated in Chile South America and were first imported into the United States in 1930 She obtained two hens Becky and Bessie four years ago from Mrs Martin Huvett of Narvon R D 1 who raised them Becky lays pale green eggs and Bessie lays pale pink ones These hens are red-feathered similar to Rhode Island Reds and weigh about 3½ pounds They are good layers and their eggs are fairly good sized

Margaret blows the contents out of the egg shells dries them, then uses an electric moto-tool to cut them Originally she used her embroidery scissors to cut them Her decorating materials consist of braids, velvets ribbons old post card and greeting card pictures, beads bead work felt, dessert flowers little china or plastic animals birds flowers, crosses netting feathers and Easter straw She also paints them with pale colors She has made wedding nativity and Easter scenes Every little object she sees seems to give her an idea for another decoration She puts hangers on some to hang them on driftwood trees makes hinged jewel cases which she lines with silk or velvet She makes corsages of them sets them on metal stands, makes birds, bird houses, carts etc

She has put on demonstrations of making them and exhibited them at churches, fire halls and Granges She entered them twice at Hobby Shows held by the Optimist Club of Lancaster at the Mayser gymnasium of Franklin and Marshall College and three times at the Southern Lancaster Co Community Fair held at Quarryville Each time she was a first place winner

Another hobby of Miss Patterson is fancy work She loves to knit Her grandmother taught her to knit before she was six years old and an aunt taught her to do embroidery work when she was a young girl She also does needlepoint and makes quilt tops She has made four afghans and is working on her fifth, crocheted two bedspreads, two tablecloths, two suits and one dress, crocheted and knitted many baby sacque sets, caps, mittens and is now knitting a full length coat She has patched several quilt tops embroidered a quilt top, many scarfs, pillow cases etc She crocheted edgings for many of the embroidered pieces She has made many stuffed toys for bazaars Indeed she burns midnight oil at this hobby Even her bull-dog was the recipient of her handiwork She made him a knitted coat and cap Yes, she made him a Santa Claus suit one Christmas

Through the years she has won many prizes on her fancy work at county fairs She also is a beautiful seamstress She makes many of her clothes and gives many garments away to relatives and for church mission work

Pat is a flower lover and really has a green thumb He lawn is a mass of blooms from early spring until frost There are big round tulip bed that turns into a bed of annuals when summer arrives Then the other spring flowering bulbs such as hyacinths jonquils, crocus later lily of the valley several kinds of lilies dahlias and gladioli She has several kinds of peonies iris chrysanthemums and many kinds of tea roses and climbing roses "The roses are my favorite", she says She has all kinds of shrubs such as forsythia, hydrangea mock orange rhododendron azalea flowering almond, spireas, five or six kinds of lilacs hibiscus and clematis vine Besides the usual shade trees she has flowering crab holly pink and white dogwood Bonanza dwarf peach Kwanzan cherry wisteria mimosa and evergreens

Margaret and her sister Bertha live together They have a large house with many antiques which have been in the family for several generations Some of their prized ones are Victorian sofas rockers chairs, marble top tables and bedroom furniture, drop leaf table, grandfather clock mirrors, wash bowl and pitcher sets lamps and dishes

ANTIQUES. This grandfather clock with moon dial, stars and days of the month has been in the Patterson family for over 200 years. The marble top German-made table is of hand-carved walnut. The chair is one of her grandfather Gibson's which she has covered with needlepoint. L. F. Photo

BECKY, the Araucana hen lays green eggs to help Miss Patterson with her Easter decorations. L. F Photo

Miss Bertha is also quite handy She sews and makes stuffed dolls and toys She has made over 300 dolls and made the clothes for them It is hard for her to keep up to the demand for them She keeps a few chickens, mows the lawn and keeps house

Pat has been employed in the office of Armstrong Cork Company, Lancaster for 40 years, having been in the Treasurer's Department, Cashiers Office the past 26 years She is a member of Circle A, having served as president one year and treasurer one year They do a lot of charity work and have social activities. They have conducted tours to such places as New York City and Europe Some of their money-making projects include candy sales, bazaars, plays, card parties and horse shows Charities which have benefited from their endeavors are Child Development Center, Crippled Children Society,

(Continued on Page 23)

HANDS COVERED IN LACE have a genteel look and a gentle touch. These dainty gloves go along with the lovely light dresses of spring and summer. The pair is crocheted of mercerized cotton yarn. A cord, run through eyelets around each wrist, ties in a bow. Free instructions are available by sending a self-addressed, stamped envelope to the Needlework Editor of this newspaper along with your request for Leaflet PC 4061.

Ladies, Have You Heard? . . .

By Doris Thomas, Extension Home Economist

Tips On Buying Frankfurters

Store franks promptly in the refrigerator and use within a week

For best flavor, don't freeze franks They lose flavor when held at home freezer temperatures just as do other cured and smoked meats

Plan to buy franks every week in the amount you plan to use within the week

THOMAS

Careful Marking Saves Sewing Time

Careful and complete transfer of pattern markings to the fabric saves time

Mark seams, darts, tucks, pleat lines, and gathered sections

Transfer any other markings, such as center front and center back lines, that will help you put the garment together.

If you use dressmaker's carbon paper which comes in several colors, you can mark both sides of the fabric at once.

Use a color of carbon paper that has enough contrast to be seen but doesn't show through to the right side of the fabric Do not use typewriter carbon paper.

Place the waxy side of the carbon paper against the wrong sides of the fabric

Practice on a scrap of fabric before marking each peice

Mark pattern lines with a tracing wheel using a ruler as a guide to help keep lines straight. Mark across the points where darts, tucks, or other stitching lines should end

You may not need to use carbon paper on some fabrics—the tracing wheel will leave an indention in the fabric which may serve as a marking guide

Because of their color, sheerness, or texture, some fabrics need marking with tailor's tacks Directions for tailor tacks are usually given in pattern guide

You can use chalk or pins for marking center front and fold lines

Markings may be less accurate, as chalk is easily erased, and pins are easily lost

On some fabrics you can press a slight crease to mark center front and center back lines and fold lines

Handle Pesticides With Caution

Because accidents can happen when certain pesticides pen-

O Box 525, Lancaster. —Adv.

● Farm Women

(Continued from Page 21)

Mrs Wilbur Kauffman, Mrs Frank Jones and Miss Mary Snyder

Mrs Robert Garber conducted devotions Mrs. Paul Kauffman, president of Society 4 was in charge

Mrs. John N. Hess first vice president of the County Farm Women's Council, sang several selection to the accompaniment of Mrs Richard Hynicka at the piano. Mrs Daniel Will displayed decorated eggs and an egg tree

Society 4 were guests of Society 1 at a luncheon meeting at 12:30 p.m. in the Lititz Recreation Center on March 29

The next meeting of Society 4 will be held April 26 at the home of Mrs. Willis Reapsome with Jennie Shaalje as speaker on life in Holland.

SOCIETY 24

Mrs. Glenn Shultz demonstrated candy making at a meeting of the Society of Farm Women 24, held at the home of Mrs. Roy Hollinger, Bareville, who was also in charge of devotions.

During the business session with Mrs. Leo Snader presiding, contributions were approved to the Society of Crippled Children and Adults and the American Cancer Society A contribution was also made to the Hemophilia Foundation.

The society approved continuing of awards to a senior student in home economics and in agriculture at Garden Spot and Conestoga Valley High Schools.

Final plans were made for the rummage sale to be held April 8 in the Bareville Fire Hall.

The next meeting will be held April 30 at 7:30 p.m. in the home of Mrs Mervin Hoober, New Holland R1.

SOCIETY 26

Society of Farm Women 26, Manheim, met at the home of Mrs. Paul Brubaker. Mrs Dave Landis was co-hostess Twenty-eight members and guests attended

Mrs Kenneth Martin, president was in charge Devotions were led by Mrs. J Harold Esbenshade Three new members were introduced: Mrs Gordon Landis, Mrs Alvin Herr and Mrs Robert Graybill

The program featured Mrs E. Viola Smith, Lancaster, who spoke on handwriting. The next meeting will be April 24 at 7:30 p.m. at the Wenger Clinic, Lititz-Pike, Lancaster. Members of Society 2 will be entertained

SOCIETY 23

Mrs. Michael Valvances spoke on life and customs of Greece at a recent meeting of the Society of Farm Women 23.

THE CARDIGAN IS REFINED for dressing up in a gentle way. Its lacy leafy texture is lightly knit of super fingering yarn. Scallops ripple the sleeve edges and bottom border. It can be made in nurses' sizes 10-16. Have this pretty sweater ready when spring whispers in your ear. Free instructions are available by sending a self-addressed, stamped envelope to the Needlework Editor of this newspaper along with your request for Leaflet PK 4727.

● Have You Heard?

(Continued from Page 21)

etrate the skin, use certain precautions when working with oil emulsions of insecticides such as DDT dissolved in kerosene

Read the label and observe safety precautions when you use pesticides paints, cleaning fluids,

The group heard a report that 84 persons received free anti-tetanus inoculations at Nissley's Farm Service. A follow-up clinic will be held at the same location April 17

The society will meet April 24 at the home of Mrs. Abram Fisher, Lancaster R2

or other household chemicals.

Wear rubber gloves and other protective clothing as directed on the label.

If chemicals are spilled on your skin or clothing, wash the affected areas thoroughly with soap and water and remove chemically soaked clothing as soon as possible.

When spraying or dusting, avoid contact with the skin and prolonged inhalation of mists or dusts.

Remember to read the instructions on the label each time you use a pesticide or an insecticide whether you use it indoors or out.

HEIFERS FAST at low cost with... NEW PURINA HEIFER CHOW

More and more local dairymen are proving that a small extra investment in heifer feeding can pay off when heifers freshen and begin contributing to the milk check.

And research has proved that heifers which produce well in the first lactation continue to be high producers over a longer milking life than average cows.

NEW Purina* Heifer Chow* has been developed to help you grow big heifers fast, conveniently and at low cost. New Heifer Chow is a palatable, coarse 14 per cent protein ration, fortified with vitamins and minerals to stimulate fast, solid heifer growth.

To build low-cost growth, you need feed only 3 pounds of New Heifer Chow per heifer per day if your legume forages are of good quality. For best results, start your heifers on the Purina heifer growing program at six months of age until 90 days before freshening when they'll be fed on the basis of their condition and on the quality of your forage.

Drop in soon and pick up a copy of our New Purina Heifer Growing Program folder. It explains the program to follow for fast-growing, early-freshening heifers at low cost.

● Miss Patterson

(Continued from Page 20)

American Cancer Society, Arthritis Foundation, Lancaster Co Mental Health Association, Muscular Dystrophy, Halfway House and the Boys Club of Lancaster, Christ Home, Harrisburg and Embreeville State Hospitals, Big Brothers in Lancaster and various others

Miss Patterson was born and raised on a dairy farm in Fulton Township and graduated from Fulton and Quarryville High Schools. In 1933 they moved to the Rohrerstown area, lived a short while in Grandview Heights, 15 years on a farm at Hartman's Station and have lived at Leacock 19 years She has been a lifetime member of Little Britain United Presbyterian Church and helps with their Circle work She formerly sang in the church choir. She came from a musical family Her parents and two sisters played the violin and she and her sister played the piano At one time they had a family orchestra which included some of the grandchildren and a few outsiders

Margaret is quite fond of horses She owned a horse known as "Quintonion" which she showed for ten years in the roadster class at Quentin, Devon, Newark, N J, Hanover, York, Williamsport and Lenark, N J She was the recipient of 95 ribbons with this horse

Miss Patterson is also accomplished in the culinary art She loves to bake and try new recipes She and her sister make jellies, preserves, can and freeze many fruits and vegetables Here are a few of her good recipes:

SCALLOPED EGGPLANT

- 1 eggplant
- 1½ cup Pepperidge herb seasoned stuffing
- ¾ cup water plus ⅓ cup butter
- 1 can mushroom soup

Peel and dice eggplant Put the water and butter over the stuffing and toss lightly to blend Grease a covered 2 quart casserole Put layer of the diced eggplant on bottom, then some of the stuffing, more of the eggplant etc until all has been used Pour mushroom soup over the top Cover and bake in 350 deggree oven for ½ hour until the eggplant is tender

Here's an idea for your Easter menu —

EGGS IN HAM NESTS

- 1½ cups cooked ground ham
- 2 tablespoons ham fat
- 2 tablespoons flour
- ¼ teaspoon salt
- 1 teaspoon dry mustard
- 1 cup milk
- 6 eggs

Melt fat Add flour and blend Add chopped ham and cook two minutes, stirring constantly Add salt, mustard and milk and cook slowly until thickened Pour into a greased shallow baking dish Make 6 hollows in the mixture and drop an egg in to each Sprinkle with salt and pepper Bake at 325 degrees for 25 minutes or until firm Serves 6

For tea time try her

CHOCOLATE CRINKLE COOKIES

- ½ cup cooking oil
- 4 squares unsweetened chocolate melted
- 2 cups sugar
- 4 eggs
- 2 teaspoons vanilla
- ½ teaspoon salt
- 2 teaspoons baking powder
- 2 cups (sifted) flour
- 1 cup 10X sugar

Mix oil, chocolate and sugar Blend in 1 egg at a time Add vanilla Stir in flour, salt and baking powder Chill over night Heat oven to 350 degrees Drop teaspoons of dough into 10X sugar Roll around and shape into ball Place 2 inches apart on greased baking sheet Bake 10 to 12 minutes.

Here's a different but very delicious cake and frosting —

RED VELVET CAKE

- 1 cup shortening
- 1½ cup sugar
- 2 eggs
- 1 tablespoon vinegar
- 2 tablespoons cocoa
- 2½ cups flour (sift 3 times before measuring)
- 1 teaspoon vanilla
- ¼ teaspoon salt
- 1 cup buttermilk
- 3 1 oz. bottles red food coloring
- 1½ teaspoons baking soda

Make a paste of coloring cocoa and salt Add to creamed sugar and shortening and egg mixture Put vanilla in buttermilk and add alternately with flour Put soda and vinegar in a cup (it foams) and add Bake in two 9" pans, 1½ to 2" deep at 350 degrees for 30 to 35 minutes

FROSTING

- 1 cup milk
- 5 tablespoons flour

Make a paste and cook till real thick Put in refrigerator till thoroughly cold Add

- ½ lb. real butter (room temperature)
- 1 cup confectioners sugar
- 1 teaspoon vanilla

Mix on high speed on electric mixer till light and fluffy

Margaret is creative when it comes to making flower arrangements, corsages and Christmas home decorations She has made many pine cone wreaths and lends her hand at decorating the Christmas tree each year for her department at Armstrongs Each time they have an outstanding new idea which attracts the attention of the other departments Right now she has an Easter hat door decoration in the office

Of all her hobbies Margaret says "Eggs are more fascinating I can relax doing them more than anything else

First Impression

We rely upon clothing to help us form our first impressions about people reminds Mrs Ruth Ann Wusch, Penn State extension clothing specialist First impressions help us recognize friends in a crowd and may help us to see a person's immediate plans so we can adjust our behavior accordingly Regardless of how accurate these first impressions are, they have an influence on our lives

Penna. State Parks Are Outdoormen's Paradise

Pennsylvania's State Parks and Forest lands have become a virtual paradise for the outdoorsman, particularly the bird watcher, as flocks of migrating birds make use of the woodlands, lakes and streams as havens of rest while enroute to their northern breeding grounds

The Fox Sparrow, the largest of the sparrows and distinguished from the others of his species by a light reddish brown tail, has arrived, along with the long crested Cedar Waxing, a medley of pale blue brown and golden yellow with little red appendages on its wing quills

Also flocks of the Eastern Song Sparrow, identified by some bird-watchers as the ground bird or ground sparrow; the Black Chicadee, distinguished from the Acadian Chicadee by its black cap, and his "twin" the Carolina Chicadee

Not to be forgotten are the various species of waterfowl including the regal Mute and American Whistling Swans with their pure white plumage, the honker, or Canadian Goose, and the Ring-billed Gull with its black ring or partial cross bar on its bill A very distinct black band on its tail should separate it from the Herring Gull

Three species of grebe can be found on the lakes of some areas the Red Necked or Holboell's Grebe, the Horned Grebe or Hell diver, and the Pied-billed Grebe which is sometimes referred to as the Water-witch.

There are also flocks of Golden Eyes, the Buffle Head and the common, or American, Merganser, the largest American duck; as well as the Mallard and his mate, with their adaptability to breed anywhere as long as they are not molested; and the Black Duck, the "Wild Duck" of New England

Hovering overhead may be members of the hawk family including the Northern Red-Shouldered Hawk the Eastern Red-Tailed Hawk, the largest common hawk except the Osprey, and the Sparrow Hawk, the smallest of the species

AT THE TWIN VALLEY YOUNG FARMER MEETING. (Left to right) Ben Beiler, State Secretary; Andrew Stoltzfus, DHIA Winner; T. E. Wolfe, Young Farmer Advisor and Omar Beam, President. The Third Annual Banquet was held last Friday night at the Twin Valley High School Cafeteria.

(Continued from Page 17)

One of the world's major destroyers of small grains, the cereal leaf beetle was first identified in the United States in Michigan in 1962 Since that time the pest has been found in seven states. If allowed to spread unchecked, the cereal leaf beetle could seriously limit the production of wheat, barley, and oat crops of the Midwest

New Alfalfa Resists Weevil

The alfalfa weevil has just lost another round in its battle to survive.

A new alfalfa variety for Maryland makes it harder for the old weevil who is "just looking for a home."

Named "Team" because it was a joint development by the agricultural experiment stations of Maryland, North Carolina, Virginia and the U.S Department of Agriculture, the new variety has a stem that the weevil either can't or doesn't like to lay eggs in.

Fewer eggs mean fewer weevils, but the new variety has other advantages as well It also has more resistance to anthracnose, two kinds of leaf spot and the pea aphid than do commercial varieties now grown in Maryland says Dr. John Schillinger, researcher with the Maryland Agricultural Experiment Station.

Dr Schillinger found "Team" to be a vigorous growing variety that yielded as well as Saranac, Iroquois, Cherokee or Vernal Dairy scientists discovered that cattle ate and digested Team as well as they did Williamsburg alfalfa

Both production and feeding experiments were conducted on the Agronomy Dairy Forage Research Farm Dr I C Haut, director of the Maryland Agricultural Experiment Station, feels that the new variety 'will make a significant contribution to the livestock industry

Scientists worked for 11 years through "six cycles of selection for alfalfa weevil resistance" to produce Team, but the result seems to have been worth the work Dr Schillinger says, "The weevil resistant level present in Team in combination with an early harvest management, should reduce the need of spraying for the weevil"

Certified seed will be available for planting in 1970.

Skim Milk Made To Whip

Dried skim milk can now be whipped into a low-calorie dessert topping

The key to whipping ability, ARS scientists found, was homogenization of the skim milk before drying it to a powder. When reconstituted with water and whipped, a brilliant white foam is produced which resembles stiffly beaten egg whites The foam will hold its shape for over an hour, and whipping utensils may be at room temperature.

Although the foam has a bland taste, it may be sweetened with sugar or a sugar substitute and flavored by adding vanilla extract or fruit flavored jam or jelly.

Each cup of the whipped topping has only about 55 calories, compared to 350 calories in an equal amount of whipped cream One quart of topping can be whipped from one cup of the reconstituted skim milk

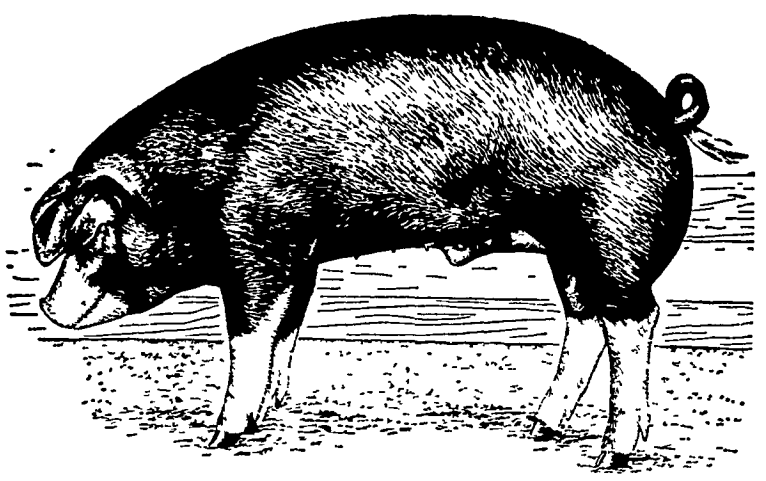
Research on the homogenized dried skim milk was conducted by chemists Arjen Tamsma, Arnold Kontson and Michael J Pallansch of the Eastern utilization research laboratory, Washington, D.C.

Ability of the reconstituted milk to foam depends upon the pressure under which it is homogenized and the percent solids in the final product The most ideal foam was obtained when non fat milk that had been homogenized at a pressure of 4,000 pounds per square inch was reconstituted with one part water to two parts dried powder by volume and whipped for 3 minutes.

This method produced a rigid, self supporting foam containing 6 percent total solids

Homogenizing skim milk is an inexpensive process with few production problems Homogenizing would give dried skim milk a dual purpose both as a fluid milk and as a whipped topping And like conventional dried skim milk the homogenized product does not require refrigeration.

For each ton of



Beacon's Improved Swine Feeds you purchase

Get one set of these handsome, gift packaged Americana insulated mugs FREE!

From now until May 10th, 1969 your Beacon dealer will give you one set of these handsome, practical and durable mugs free with the purchase of any combination of Beacon Swine Feeds totaling one ton purchased at one time.

WASHINGTON REPORT

Congressman Edwin D. Eshleman

16th District—Pennsylvania

Very recently, the Education and Labor Committee on which I serve reported its first piece of major legislation — The Elementary and Secondary Education Act Having cleared the committee, the bill becomes a matter for consideration by the entire House of Representatives Obviously, this is an important legislative issue to the field of education, but it is important, I think, for some other reasons too Primarily, this bill represents the first skirmish in the 91st Congress over the shape of existing social legislation

There is some contention in Washington that the Democrats in the Congress are determined to buck any attempts by the Nixon Administration to revise or eliminate "Great Society" programs As the only House Committee overwhelmingly dominated by Great Society advocates, the Education and Labor panel is sure to become the Congressional breeding ground for Democratic alternatives to Nixon Administration proposals. The committee passage of the Elementary and Secondary Education Act was the first hint that the Democrats intend to use E&L as custodian of a major share of the social legislation enacted in the Johnson Administration.

Over the objections of the Republican members of the committee, the Act was reported with substantially the same contents as formulated during the past four years, and more importantly, was extended to include the next five years. This means that the Nixon Administration could have no opportunity to secure passage of its own ideas in an area as vital as aid to schools The Administration may have no chance, for instance, to seek better and more efficient ways of financing this massive program

How can such a situation arise? Democrats control House committees, as well as the House itself, by varying margins. But in the House, and in all the committees except Education and Labor, the Republican minority frequently has the opportunity to put together a working majority. Alone among the committees, all 20 of E&L's Democrats are primarily committed to furthering the kinds of social legislation generally associated with the Great Society.

I don't want this to sound like sour grapes, because I am all too familiar with the frustrations of the legislative process. But I am concerned that the pattern that seems to be developing in my committee could stalemate even the most responsible attempts to change the course of domestic policies. Such a Democratic stranglehold will be a blockade to any efforts to revamp a large portion of Federal-aid programs including the controversial war on poverty. It seems pretty clear that the American people desire some new approaches to our national problems and I find real cause for wondering whether the Education and Labor Committee will answer that desire The Elementary and Secondary Education Act maneuverings were not a particulary hopeful sign

Barnacle Goose

In medieval times the fact that no eggs or goslings of the species were ever found gave rise to to the legend that the barnacle goose emerged, fully developed, from barnacles, hence its name

METAL ROOFING by FABRAL

THE MOST COMPLETE METAL ROOFING LINE AVAILABLE ANYWHERE!

- Aluminum
- Galvanized Steel Factory Painted Aluminum
- Factory Painted Galvanized Steel
- Long Lengths - up to 40'
- Customer Lengths - You name the length

Now Fabral Metal Roofing is available in your area. For the first time you can specify the configuration, (choice of 7 available), and type of metal (aluminum, galvanized steel, factory painted aluminum, factory painted galvanized steel - even stainless steel). You can even specify the EXACT CUSTOM LENGTH (up to 40' long) tailored to YOUR job in most of these designs. In most cases, one piece of metal roofing will run from the peak of the roof down to the eave. No end laps to cause leakage - fewer sheets - less cutting and fitting on the job. The Fabral program saves on-site labor and gives you a neater, stronger and better building.

There are Fabral metal roofing sheets designed to fit your requirements for farm, industrial, commercial, utility and general purpose structures. Whether you are building a new structure or recovering an old one, you owe it to yourself to find out about Fabral Metal Roofing - the most complete line available - ANYWHERE!

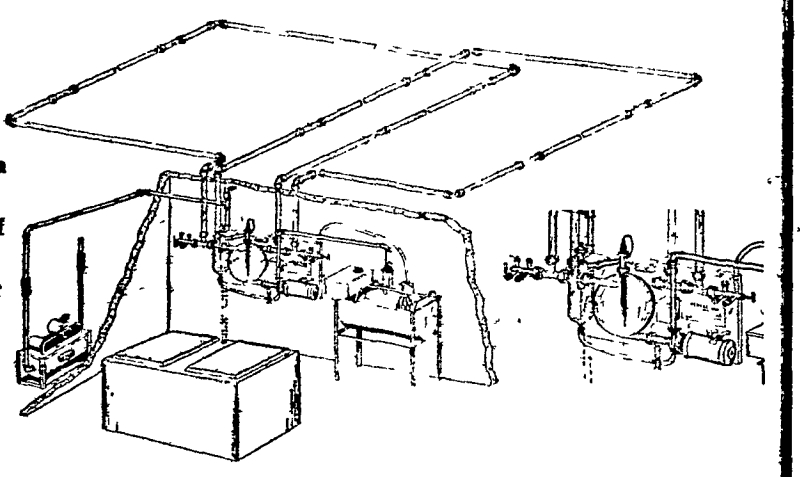
WHY BUY A PIPELINE?

For An Average 40 Cow Herd You Can . . .

1. Save walking 100 miles a year.
2. Save carrying 292 tons of milk a year.
3. Save 200 hours per year on an average herd.
4. Produce higher quality milk.
5. Increase your milk production.



WHY BUY A PERFECTION PIPELINE?

1. Engineered for the modern dairy farm of today as well as the dairy farm of tomorrow. Around the barn pipelines and milking parlors.
2. The only milkhouse control unit that is assembled at our modern new factory on a stainless steel panel. Pretested for trouble free operation, self-draining with patented washing features.
3. Built and guaranteed by Perfection Milker-Division of Sta-Rite Industries, Inc., of Delavan, Wisconsin, a recognized leader in home water systems and agricultural components.

Pennsylvania Sire First For Type

Simpson Farm Tidy Gent has been rated as the Number One A I. Proven Holstein Sire in the U S. for improving type In service at Northern Breeders Association (NEBA) of Tunkhannock, Pa., he was accorded his recognition by the 1969 edition of Washbon's Directory

Washbon's Directory is an annual publication which lists all A I porven sires available in the United States and Canada A special feature of it is a listing of the top sires in each country for improving milk production, fat production, and type

Gent, listed as the top sire for improving type did so on the basis of the official Type summary reported for him by the Holstein-Friesian Association of America Based on 40 daughter-dam comparisons, it shows an increase over expectancy of +3 05 (HFA—October—1968)

The latest (Jan. 1969) Holstein Association Descriptive Ratings show Gent to be well above bred average in siring the following traits. stature. front end, hind legs, feet, fore-udder, udder support and floor, and teats The January 1969 USDA Summary based on 247 Gent daughters in 158 herds, indicates a Predicted Difference for him of +202 lbs. of milk and +8 lbs of fat at a 92% repeatability

Simpson Farm Tidy Gent was bred by J R Simpson and Sons of Butler, Pa Sired by Tidy Burke Jerry he is out of Simpson Farm Expectation Odel, a VG 87 cow that had 6 records over 1,000 lbs. of fat before leaving the Simpson herd.

Gent was purchased in 1963 by the First Pennsylvania Breeding Association of Lewisburg, Pa. Later in 1964 when First Pa. merged with other A I. Co-operatives to form NEBA, Gent moved to the present headquarters in Tunkhannock, Pa

Swarming Termites No Cause To Panic

If you have seen large swarms of dark, flying insects in the past two or three weeks, the chances are they are termites, says Dr William Bickley, head of the University of Maryland Entomology Department

But swarms of flying termites are no cause for panic, Dr Bickley adds

Every year when the weather begins to warm up, termite adults leave wood and tunnels in the soil in preparation for mating The winged form of this insect does not bite or eat, so it can do no damage. However, a few of the winged females and males will mate and establish new colonies

The workers (wingless and white) in these colonies must have wood to eat, but the colonies develop slowly There are very few instances of serious injury being discovered all of a sudden, Dr Bickley says

Sometimes flying termites are confused with flying ants or other insects, but the termites have wings that are much longer than their bodies.

If you see termite swarms, don't panic. Request estimates from several reputable pest control operators. Members of he National Pest Control Association will give estimates of charges to be made for controlling the wood-eating insects.

Governor's Award For Excellence Earned By Farm Show Director

The man who turned Pennsylvania's Farm Show complex into a year-round facility for numerous agricultural, industrial and other public events today received the Governor's Award for Excellence among State employes for March.

At ceremonies in his Reception Room, Governor Raymond P. Shafer presented the award to Horace L Mann of (106 Valley View Road) New Cumberland director of both the Pennsylvania Farm Show and the Farm Show complex in Harrisburg.

The Governor said that, under Mann's guidance, annual activities in the complex increased from 34 events in 1963, the year Mann took charge, to 61 last year He said the additional activities have brought increased revenues to the Harrisburg area.

Horace L. Mann

"I am especially pleased that the additional activities, many of which are educational and recreational, have benefited thousands of Pennsylvanians," the Governor said.

Administering the Farm Show complex can be a hectic and complicated business, Governor Shafer stated. He said that as many as four events were held at the complex at one time last year.

He also noted that the complex was in operation 328 days during the 1967-68 fiscal year. He explained the usage this way 155 actual show days, 111 set-up days, and 62 tear-down days

"Being able to keep the Farm Show complex operating smoothly and efficiently requires good management and leadership," Governor Shafer said. "Mr. Mann has demonstrated he is an extraordinary manager as well as an extraordinary leader."

The Governor said that Mann's administrative abilities "increased maintenance efficiency, improved the public's image of governmental service and established a high esprit de corps among Farm Show employes."

Mann, a graduate of Pennsylvania State University's College of Agriculture, has been director of the Farm Show complex since August 7, 1963. He was born and raised in Clearfield.

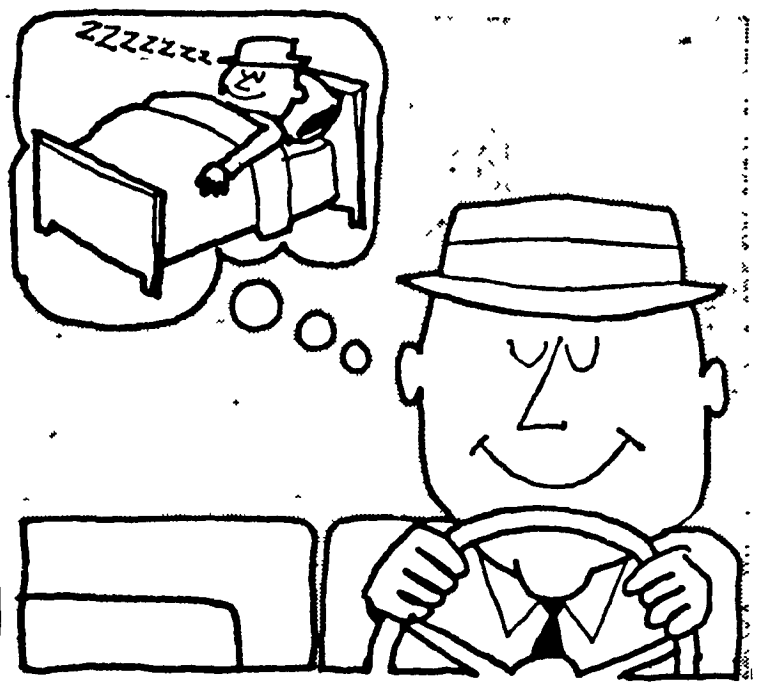
Changes In Farming

Changes are constantly taking place in all walks of life and are equally true in agriculture. The other day we were talking about the changes in dairying and I thought that a few of these might be of interest to our readers: (1) All breeds want a larger, more upstanding cow; (2) cows with horns are decreasing in number each year; (3) more records are in pounds of milk rather than in pounds of fat; (4) three-times a day milking is almost a practice of the past; and finally, (5) high-producing two-year old heifers indicate milking ability and will stay in the herd longer than low-producing herdmates.

Tips from a Pro

Wray Mundy
NATIONAL TRUCK DRIVER OF THE YEAR



Sleepy? Stop & Rest!

Healthy Grass

A stand of healthy grass in a lawn is one of the best preventatives against disease, dry weather, insect infestation, and weeds. One method of attaining this kind of turf is to lime and fertilize when needed. A complete soil test is the best way of learning this need. Few lawns will need lime every year but all grass will respond to fertilizer at least once a year. Early spring is a good time to make this application. A complete fertilizer containing part of the nitrogen in the slow-available form should be used this spring if none was applied last fall. Straight grass stands can utilize only nitrogen fertilizer if the test reveals sufficient phosphorus and potash in the soil. Start now to have a good lawn later this summer.

MORE FEED PER ACRE

Stanford's new Horse Pasture Mixture out-produces all other blends. It features 3 varieties of TETRAPLOID RYEGRASSES. Grows taller, thicker, sturdier grass rich in protein and sugar. A single seeding lasts up to 10 years. See for yourself how you can get more feed and save money!

Who Needs Fertile Eggs?

As eggmen will recall, there was a time when most laying flocks roamed the farmyards and fertile eggs were the result – and a frequent problem —especially in the summertime

With today's caged layers, the problem has shifted into reverse Where in a big city like Chicago can a man buy a dozen fertile eggs?

Ewird W Priebe, Jr was driving on West Fullerton Avenue on a typical blustery March day in the Windy City when a sign painted on a poultry store window grabbed his attention "We Have Fertile Eggs" read the sign

After several days of wondering why anyone would want fertile eggs Priebe returned to the poultry store, took a picture of the window and sent it to Dr L A Wilhelm, president of the Poultry and Egg National Board, with a note asking for an explanation He got fast action

Dr Wilhelm phoned Priebe the following day and advised him that the growth of large city science fairs and high school biology classes has created a demand for fertile eggs as hatching projects The sign in the window could save the parents of such students many anxious hours of frantic search ing for fertile eggs, he explained

In a few areas of the country, Wilhelm continued, there are consumers—perhaps "odd" by modern standards - who pay healthy premiums and drive long distances to obtain fertile eggs for eating

I guess it takes all kinds ' replied Priebe

Computers Keep Tabs On Cattle Population

There are fewer secrets down on the farm, now that computers are giving the barnyard population the human treatment

The invasion of privacy extends to dairy herds beef cattle and hogs and sheep

This purposeful prying is designed to help farmers and ranchers keep closer tabs on dairy and meat production performance of their animals

First step in this massive recording job is hanging a chain and numbered plate around the neck of each animal scheduled to get the lifetime computer treatment Since the cattle, hog and sheep population of the U S is about 190,000 000 giving them all a four-foot chain "necklace" and tag would require enough livestock chain to stretch across the U S about 48 times Chain is used for durability and the smooth links do not chafe hides

With many state agricultural colleges and livestock breeding organizations operating time-sharing computer systems for dairy farmers and livestock breeders, record-keeping is faster and more accurate and useful

Farmers and ranchers supply each cow, hog and sheep with a number and a name shorter than six letters Longer names won't do, since most available computer systems for this purpose work only on six digits or less Names and numbers are etched on metal or plastic plates and fastened firmly to the neck chains

For dairy herds, daily records are kept on milk production butterfat tests and amounts These are either forwarded to or picked up by remote computer systems that keep monthly records, measure production performances against those of other cows or herds and supply farmers with yardstick information to compare their herd's performance with current averages This enables dairy farmers to cull inferior performers from their herds, when necessary

Computerized systems for continuous analysis of proper weight gains by beef cattle, as well as by hogs and sheep, are also getting under way in major livestock raising areas
